

6 IMPORTANT: Read these instructions BEFORE tensioning fabric

1 - Recommended method.

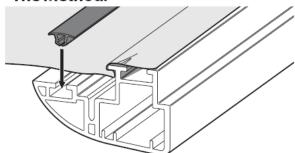

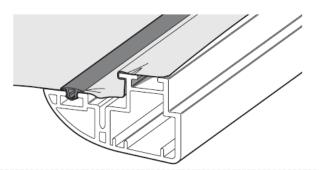

1 Use your **body weight** to insert the Pi-Grip in one short and powerful move, firmly but smoothly, in the center of the length.

2 Use the same technique, working out from the center of the Pi-Grip towards each end.

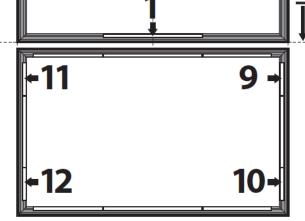

2 - The Method.

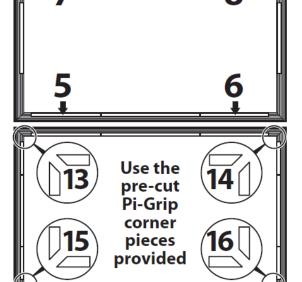

CAUTION: Do not manually over-tension the fabric. Fitting the Pi-Grip will apply the correct tension

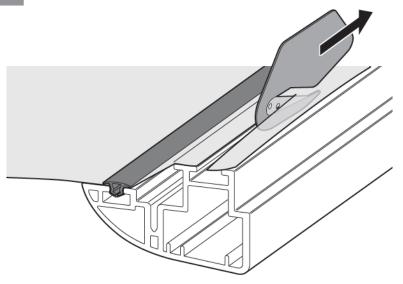

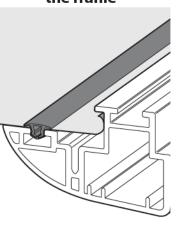

If the fabric is not flat, the tension is not correct. If this is the case, remove the Pi-Grip and re-fit applying more manual tension.

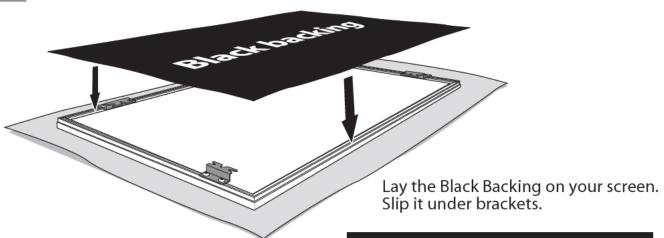

7 TIP: Use the groove of the aluminium profile as a guide to cut the excess fabric.

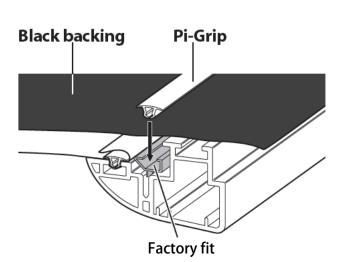

Place the fabric inside the frame

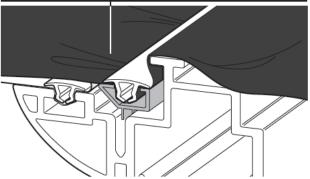

8 Black backing installation follows the same principle as fabric fitting.

VERY IMPORTANT Do not tense Black backing! Over-tensing it can damage the screen.

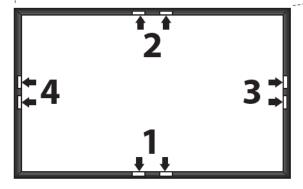

Loose Black backing will not have any effect on video or audio results and minimize the constraint on the frame.

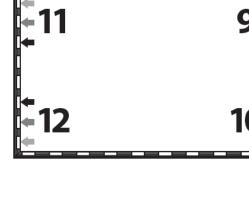

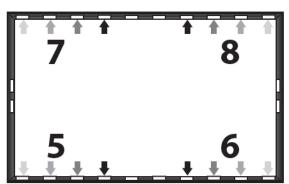

9 Black Backing layer: Pi-Grip insertion sequence and positioning.

Pi-Grip
Pi-Grip
Pi-Grip
Space the short Pi-Grip pieces around the frame evenly (approximately every 25cm/10")
starting at the center of each side of the frame.
Continue in the same fitting sequence as for the screen fabric.

CAUTION: Do not manually tense the fabric

Hang the screen according to the chosen kind of brackets.
